BACKGROUND
- 2nd camp in world
- more than 100 thousands refugees
- +12,000 people are living with disability
- +3500 cases are badly in need of support
- 700 in need of orthopedic devices
- Drought and disability prevention project
Molding: an easy and efficient technique

Patient presentation
Molding: an easy and efficient technique

Goal

- Allow fitting during molding and maximize success of prosthesis

Method

- 3 steps
Molding: an easy and efficient technique

Step 1: Making short casting around joint.

- Stump preparation
- To shape the cast
- Some guides for casting
2nd step: fitting

Molding: an easy and efficient technique

Proximale time lines  Fitting  Suspension & Confort
Molding: an easy and efficient technique

3rd step: Completing the cast of the stump
Molding: an easy and efficient technique

Result a solid molding

- Forms conservation
- Alignment conservation
Conclusion

We repair lives
